

NIMASHI SANKHAPALA

SOFTWARE ENGINEERING UNDERGRADUATE

Gampaha | nimashisankhapala@gmail.com | +94 765261853 | [LinkedIn](#) | [GitHub](#) | [Portfolio](#)

SUMMARY

Motivated Software Engineering undergraduate with strong skills in programming, web development, and problem-solving. Experienced in developing academic, personal, and group software projects using modern technologies. Passionate about building efficient, user-focused software solutions and continuously expanding technical skills. Seeking a Software Engineering internship to apply technical knowledge and gain practical industry experience.

EDUCATION

BEng (Hons) Software Engineering (Undergraduate)	09/2024 – 09/2028
University of Westminster - Informatics Institute of Technology	
• Successfully concluded all modules with full credits in each academic year.	
GCE (A/L) – Physical Science Stream	2023(2024)
C.W.W. Kannangara Central College - Hunumulla	
• Obtained 3C passes for Physics, Combined Mathematics and Chemistry.	
Computer Diploma Course	2021 – 2022
Institute of Datatech Lanka (Pvt) Ltd	
• Finished training in computer fundamentals, Microsoft Office, and internet applications.	
GCE (O/L)	2019
C.W.W. Kannangara Central College - Hunumulla	
• Achieved 6A & 3B passes including Mathematics, Science, English, ICT and Commerce.	

SKILLS

Python	Flutter	GitHub	Teamwork	Problem Solving
Java	JavaScript	Node.js	Leadership	Time Management
MySQL	HTML	Algorithms	Adaptability	
OOP	CSS	Machine Learning	Decision Making	

LANGUAGES

Sinhala
English

EXTRA-CURRICULAR ACTIVITIES

Junior Prefect	2018 - 2019
C.W.W. Kannangara Central College	
• Coordinated student participation and assisted teachers during school assemblies and events involving 100+ students.	

EXPERIENCE

Full Stack Engineer Intern	2026 - Present
Airport & Aviation Services (Sri Lanka) (Private) Limited	
• Developed and deployed a full-stack Departure Entry Ticketing System using React, Node.js, Express.js, and Microsoft SQL Server to streamline airport ticketing, session management, and real-time revenue operations.	

PROJECTS

Departure Entry Ticketing System

2026

Internship Project

- Developed a web-based departure ticketing and revenue management system using React, Node.js, Express.js, and Microsoft SQL Server.
- Implemented ticket issuance, printing, session management, revenue tracking, and sales reporting.
- Integrated frontend, backend, and database to support real-time ticketing and system-specific dashboard data.
- Implemented serial number generation, income calculation, transaction handling, and error-ticket management.

SkillForge — AI-Powered Skill Development Platform

2026

Personal Project

- Developed an AI-powered platform for skill assessment, personalized learning paths, and progress tracking.
- Implemented AI-based recommendations to help users identify relevant skills and learning resources.
- Designed a responsive, user-friendly interface focused on personalized learning and career development.

Intelligent Meal Planning & Nutrition Recommendation System

2026

Personal Project

- Developed a web application for personalized meal planning based on user preferences, nutritional requirements, and goals.
- Implemented meal recommendation, calorie tracking, and nutritional analysis features.
- Applied Machine Learning techniques to generate personalized nutrition recommendations.

Smart Pharmacy & Prescription Scanning System

2025

Group Project

- Collaborated with a 6-member team to develop a prescription scanning and pharmacy management system to digitize pharmacy operations.
- Built prescription upload, stock tracking, and order management modules to improve workflow efficiency and inventory visibility.
- Used GitHub and Agile sprint planning to coordinate development and successfully deliver the fulfilled system.

Life Below Water Website

2025

Group Project

- Created an educational marine ecosystem website using HTML, CSS, and JavaScript with 10+ structured pages.
- Built interactive visuals and image galleries to improve user engagement.
- Optimized navigation and page structure to enhance user experience and readability.

Traffic Data Analyzing System

2024

Personal Project

- Built a Python data analysis tool using Pandas to process 1000+ Excel traffic records automatically.
- Automated data cleaning and analysis for 1000+ records, reducing manual work.
- Implemented CSV data extraction and structured processing to enable faster analysis and insights.
